Author A<sup>1\*</sup>, Author B<sup>2</sup>, Author C<sup>3</sup> [font size11]

<sup>1</sup> Complete Affiliation & Email ID [font size 10]

<sup>2</sup> Complete Affiliation [font size 10]

<sup>3</sup> Complete Affiliation [font size 10]

Available online at: <http://jacsai.org/>

Received: ...../2021, Revised: .....2021, Accepted: .....2021, Published: 30/June/2021

**Abstract**— Immediately following the names of the author(s), type *Abstract*, 10-point Times New Roman. Include a one-paragraph abstract of approximately 150 to 300 words in 10-point Times New Roman, summarizing the purpose and findings of the research. At the end of the abstract, double-space and include a line with “Keywords,” as shown below.

The abstract’s length should be a minimum of 150 words and a maximum of 200 words; it should be confined within a single paragraph.

Note: -Please do not use Citations and special symbols, mathematical formula and equations in abstraction section

**Keywords**—Component, Formatting, Style, Styling, Insert (key words)

### I. INTRODUCTION

Introduction should lead the reader to the importance of the study; tie-up published literature with the aims of the study and clearly states the rationale behind the investigation. It should state the purpose and summarize the rationale for the study and gives a concise background [1]. Use references to provide the most salient background rather than an exhaustive review. The last sentence should concisely state your purpose for carrying out the study or a summary of the results [2].

The purpose of the contribution statement is for you to provide a clear and concise understanding of the primary contribution provided by your manuscript. The statement should:

1. clearly articulate the ways in which the research provides insight to a consumer-relevant question;
2. situate your research within the existing knowledge on the topic; and
3. explain what the research adds to what is already known about the consumer-relevant problem.

As a last paragraph of the introduction should provide organization of the paper/article (Rest of the paper is organized as follows, Section I contains the introduction of ..... , Section II contain the related work of ..... , Section III contain the some measures of ..... , Section IV contain the architecture and essential steps of ..... , section V explain the .....).

methodology with flow chart, Section VI describes results and discussion ..... , Section VII contain the recommendation of ..... and Section VIII concludes research work with future directions).

### II. RELATED WORK

In this section, the author describes the previous research works in the form of title, problem statement, objectives, not repeat the information discussed in Introduction [2].

### III. METHODOLOGY

Relevant details should be given including experimental design and the technique (s) used along with appropriate statistical methods used clearly along with the year of experimentation (field and laboratory).

### IV. RESULTS AND DISCUSSION

It should include important findings discussed briefly. Wherever necessary, elaborate on the tables and figures without repeating their contents. Interpret the findings in view of the results obtained in this and in past studies on this topic. State the conclusions in a few sentences at the end of the paper. However, valid colored photographs can also be published.

\*Corresponding Author: Author ABC

## V. CONCLUSION AND FUTURE SCOPE

The main conclusions of the study may be presented in a short Conclusion Section. In this section, the author(s) should also briefly discuss the limitations of the research and Future Scope for improvement.

## VI. PREPARE YOUR PAPER BEFORE STYLING

Before you begin to format your paper, first write and save the content as a separate text file. Keep your text and graphic files separate until after the text has been formatted and styled. Do not use hard tabs, and limit use of hard returns to only one return at the end of a paragraph. Do not add any kind of pagination anywhere in the paper. Do not number text heads-the template will do that for you [31].

Finally, complete content and organizational editing before formatting. Please take note of the following items when proofreading spelling and grammar:

### A. Abbreviations and Acronyms

Define abbreviations and acronyms the first time they are used in the text, even after they have been defined in the abstract. Abbreviations such as IEEE, SI, MKS, CGS, sc, dc, and rms do not have to be defined. Do not use abbreviations in the title or heads unless they are unavoidable [2,4].

### B. Units

- Use either SI (MKS) or CGS as primary units. (SI units are encouraged.) English units may be used as secondary units (in parentheses). An exception would be the use of English units as identifiers in trade, such as “3.5-inch disk drive” [5].
- Avoid combining SI and CGS units, such as current in amperes and magnetic field in oersteds. This often leads to confusion because equations do not balance dimensionally. If you must use mixed units, clearly state the units for each quantity that you use in an equation.
- Do not mix complete spellings and abbreviations of units: “Wb/m<sup>2</sup>” or “webers per square meter”, not “webers/m<sup>2</sup>”. Spell out units when they appear in text: “. . . a few henries”, not “. . . a few H”.
- Use a zero before decimal points: “.025”, not “.25”. Use “cm<sup>3</sup>”, not “cc”. (*bullet list*)

### C. Equations

The equations are an exception to the prescribed specifications of this template. You will need to determine whether or not your equation should be typed using either the Times New Roman or the Symbol font (please no other font). To create multileveled equations, it may be necessary to treat the equation as a graphic and insert it into the text after your paper is styled [5].

Number equations consecutively. Equation numbers, within parentheses, are to position flush right, as in (1), using a right

tab stop. To make your equations more compact, you may use the solidus ( / ), the exp function, or appropriate exponents. Italicize Roman symbols for quantities and variables, but not Greek symbols. Use a long dash rather than a hyphen for a minus sign [6]. Punctuate equations with commas or periods when they are part of a sentence, as in

$$\alpha + \beta = \chi. \quad (1)$$

Note that the equation is centered using a center tab stop. Be sure that the symbols in your equation have been defined before or immediately following the equation. Use “(1)”, not “Eq. (1)” or “equation (1)”, except at the beginning of a sentence: “Equation (1) is . . .”

### D. Some Common Mistakes

- The word “data” is plural, not singular.
- The subscript for the permeability of vacuum  $\mu_0$ , and other common scientific constants, is zero with subscript formatting, not a lowercase letter “o”.
- In American English, commas, semi-/colons, periods, question and exclamation marks are located within quotation marks only when a complete thought or name is cited, such as a title or full quotation. When quotation marks are used, instead of a bold or italic typeface, to highlight a word or phrase, punctuation should appear outside of the quotation marks. A parenthetical phrase or statement at the end of a sentence is punctuated outside of the closing parenthesis (like this). (A parenthetical sentence is punctuated within the parentheses.)
- A graph within a graph is an “inset”, not an “insert”. The word *alternately* is preferred to the word “alternately” (unless you really mean something that alternates).
- Do not use the word “essentially” to mean “approximately” or “effectively”.
- In your paper title, if the words “that uses” can accurately replace the word “using”, capitalize the “u”; if not, keep using lower-cased.
- Be aware of the different meanings of the homophones “affect” and “effect”, “complement” and “compliment”, “discreet” and “discrete”, “principal” and “principle”.
- Do not confuse “imply” and “infer”.
- The prefix “non” is not a word; it should be joined to the word it modifies, usually without a hyphen.
- There is no period after the “et” in the Latin abbreviation “et al.”.
- The abbreviation “i.e.” means “that is”, and the abbreviation “e.g.” means “for example”.

An excellent style manual for science writers is [7].

## VII. USING THE TEMPLATE

After the text edit has been completed, the paper is ready for the template. Duplicate the template file by using the Save As command, and use the naming convention prescribed by your conference for the name of your paper. In this newly created file, highlight all of the contents and import your prepared text file. You are now ready to style your paper; use the scroll down window on the left of the MS Word Formatting toolbar [8,9,10].

### A. Authors and Affiliations

The template is designed so that author affiliations are not repeated each time for multiple authors of the same affiliation. Please keep your affiliations as succinct as possible (for example, do not differentiate among departments of the same organization). This template was designed for two affiliations.

- 1) *For author/s of only one affiliation (Heading 3):* To change the default, adjust the template as follows.
  - a) *Selection (Heading 4):* Highlight all author and affiliation lines.
  - b) *Change number of columns:* Select the Columns icon from the MS Word Standard toolbar and then select “1 Column” from the selection palette.
  - c) *Deletion:* Delete the author and affiliation lines for the second affiliation.
- 2) *For author/s of more than two affiliations: To change the default, adjust the template as follows.*
  - a) *Selection:* Highlight all author and affiliation lines.
  - b) *Change number of columns:* Select the “Columns” icon from the MS Word Standard toolbar and then select “1 Column” from the selection palette.
  - c) *Highlight author and affiliation lines of affiliation 1 and copy this selection.*
  - d) *Formatting:* Insert one hard return immediately after the last character of the last affiliation line. Then paste down the copy of affiliation 1. Repeat as necessary for each additional affiliation.
  - e) *Reassign number of columns:* Place your cursor to the right of the last character of the last affiliation line of an even numbered affiliation (e.g., if there are five affiliations, place your cursor at end of fourth affiliation). Drag the cursor up to highlight all of the above author and affiliation lines. Go to Column icon and select “2 Columns”. If you have an odd number of affiliations, the final affiliation will be centered on the page; all previous will be in two columns.

### B. Identify the Headings

Headings, or heads, are organizational devices that guide the reader through your paper. There are two types: component heads and text heads.

Component heads identify the different components of your paper and are not topically subordinate to each other.

Examples include ACKNOWLEDGMENTS and REFERENCES and, for these, the correct style to use is “Heading 5”. Use “figure caption” for your Figure captions, and “table head” for your table title. Run-in heads, such as “Abstract”, will require you to apply a style (in this case, italic) in addition to the style provided by the drop down menu to differentiate the head from the text.

Text heads organize the topics on a relational, hierarchical basis. For example, the paper title is the primary text head because all subsequent material relates and elaborates on this one topic. If there are two or more sub-topics, the next level head (uppercase Roman numerals) should be used and, conversely, if there are not at least two sub-topics, then no subheads should be introduced. Styles named “Heading 1”, “Heading 2”, “Heading 3”, and “Heading 4” are prescribed.

### C. Figures and Tables

All figures in the manuscript should be numbered sequentially using Arabic numerals (e.g., Figure 1, Figure 2), and each figure should have a descriptive title. The figure number and title should be typed in italic type, single-spaced, and centered across the bottom of the figure, in 9-point Times New Roman, as shown below.

Tables should be numbered sequentially using Arabic numerals (e.g., Table 1, Table 2), and each table should have a descriptive title. The table number and title should be typed in normal type, single-spaced, and centered across the top of the table, in 9-point Times New Roman, as shown below.

Table 1. Type Styles

Table Head	Table Column Head		
	Table column subhead	Subhead	Subhead
copy	More table copy <sup>a</sup>		

Figure 1. Example of a figure caption. (figure caption)

Figure Labels: Use 8 point Times New Roman for Figure labels. Use words rather than symbols or abbreviations when writing Figure axis labels to avoid confusing the reader. As an example, write the quantity “Magnetization”, or “Magnetization, M”, not just “M”. If including units in the label, present them within parentheses. Do not label axes only with units. In the example, write “Magnetization (A/m)” or “Magnetization {A[m(1)]}”, not just “A/m”. Do not label

Journal of Computer Science and Engineering in Innovations and Research  
axes with a ratio of quantities and units. For example, write  
“Temperature (K)”, not “Temperature/K”.

## ACKNOWLEDGMENT (HEADING 5)

The preferred spelling of the word “acknowledgment” in America is without an “e” after the “g”. Avoid the stilted expression, “One of us (R. B. G.) thanks . . .” Instead, try “R. B. G. thanks”. Put sponsor acknowledgments in the unnumbered footnote on the first page.

## REFERENCES

The template will number citations consecutively within brackets [1]. The sentence punctuation follows the bracket [2]. Refer simply to the reference number, as in [3]—do not use “Ref. [3]” or “reference [3]” except at the beginning of a sentence: “Reference [3] was the first . . .”

Number footnotes separately in superscripts. Place the actual footnote at the bottom of the column in which it was cited. Do not put footnotes in the reference list. Use letters for table footnotes.

Unless there are six authors or more give all authors' names; do not use “et al.”. Papers that have not been published, even if they have been submitted for publication, should be cited as “unpublished” [4]. Papers that have been accepted for publication should be cited as “in press” [5]. Capitalize only the first word in a paper title, except for proper nouns and element symbols.

For papers published in translation journals, please give the English citation first, followed by the original foreign-language citation [6].

All references arranged in the following format for and remove website (URL) references or replaced by Journal references.

### Format for Journal Paper

<First character of name & First character of Middle name>. <Last name>, “title of paper”, Journal Name, Vol. X(Issue/No), pp.<Page no>, <Year>.

**Example-1-** S.K. Sharma, L. Gupta, “A Novel Approach for Cloud Computing Environment”, International Journal of Computer Sciences and Engineering, Vol. 4, Issue.12, pp.1-5, 2014.

**Example-2-** S.L. Mewada, C. Srivastava, “A Novel Approach for Cloud Environment”, International Journal of Computer Sciences and Engineering, Vol. 4, No.10, pp.1-15, 2010.

### Format for Book/Book Chapter

<First character of name & First character of Middle name>. <Last name>, “title of book”, <Publisher Name>, <Publisher location >, pp.<page no>, <Year>. ISBN no (where ISBN no is Optional)

**Example:** K. Gupta, “A Proposed New Approach for Cloud Environment using Cryptic rules”, ISROSET Publisher, India, pp. 542-545, 2016.

### Format for Conference Paper

<First character of name & First character of Middle name>. <Last name>, “title of Paper”, <Conference title or name>, <Conference

location (country)>, pp.<page no>, <Year>. ISBN no (ISBN no is Optional)

**Example:** S.L. Mewada, “A Proposed New Approach for Cloud Environment using Cryptic Techniques”, In the Proceedings of the 2016 International Conference on Computer Science and Engineering, India, pp.542-545, 2016.

## Authors Profile

**Author A** pursued Bachelor of Science from University of Taiwan, Taiwan in 2006 and Master of Science from Osmania University in year 2009. He is currently pursuing Ph.D. and currently working as Assistant Professor in Department of Computational Sciences, Department of Electronic and Communication, University of Taiwan, Taiwan since 2012. He is a member of IEEE & IEEE computer society since 2013, a life member of the ISROSET since 2013, ACM since 2011. He has published more than 20 research papers in reputed international journals including Thomson Reuters (SCI & Web of Science) and conferences including IEEE and it's also available online. His main research work focuses on Cryptography Algorithms, Network Security, Cloud Security and Privacy, Big Data Analytics, Data Mining, IoT and Computational Intelligence based education. He has 5 years of teaching experience and 4 years of Research Experience.
